

List of Projects / Problem Statements

FSAD-PS01: Support the farmers to produce value-added agricultural products for promoting rural entrepreneurship

Build a web app that helps farmers turn their crops into more valuable products, like processed foods or handmade goods. The app should connect farmers with global buyers and promote using tech

- Admin: Manage user accounts, oversee transactions, and maintain the platform.
- Farmer: List products, manage inventory, and interact with buyers.
- Buyer: Browse products, place orders, and provide feedback.

FSAD-PS02: Promote value-added handicrafts to support tribal people

Create a platform where tribal artisans can display and sell their handcrafted items. The site should help them reach both local customers and businesses around the world, supporting the preservation and marketing of their traditional crafts.

- Admin: Manage platform content, monitor transactions, and resolve issues.
- Artisan: Create and update product listings, manage orders, and communicate with customers.
- Customer: Explore and purchase handcrafted items, provide reviews, and participate in promotions.
- Cultural Consultant: Ensure that the content accurately represents the traditional crafts and heritage.

FSAD-PS03: Gender-responsive mechanism to combat domestic violence

Develop a web app that offers resources and support for people facing domestic violence. The app should provide information on legal rights, support services, and ways to get help, ensuring gender equality and addressing health risks associated with domestic abuse.

- Admin: Manage content, user roles, and ensure data security.
- Victim/Survivor: Access resources, seek help, and connect with support services.
- Counsellor: Provide support, guidance, and monitor progress.
- Legal Advisor: Offer legal advice, update legal resources, and assist with legal actions.

FSAD-PS04: Donating necessary items to people in need

Design a platform where people can donate essentials like food and clothing, especially during emergencies like natural disasters. The app should organize donation drives and connect donors with those in need to improve their living conditions.

- Admin: Oversee platform operations, manage donation drives, and ensure transparency.
- Donor: List items for donation, track donations, and participate in emergency drives.

- Recipient: Request necessary items, track delivery, and provide feedback on donations.
- Logistics Coordinator: Organize transportation, manage inventory, and ensure timely delivery.

FSAD-PS05: Inspire awareness of Indian culture, heritage, historical places, and famous monuments

Create a web app that teaches users about Indian culture, historical sites, and famous monuments. The app should include interactive features, virtual tours, and detailed information to help users learn and explore Indian heritage.

- Admin: Manage content and user interactions and ensure the accuracy of information.
- Cultural Enthusiast: Explore content, participate in virtual tours, and engage in cultural discussions.
- Content Creator: Develop and update educational content, create interactive features, and manage virtual tours.
- Tour Guide: Provide insights and detailed information during virtual tours, and answer user queries.

FSAD-PS06: Investment perception and selection behavior towards mutual funds

Build a web platform that provides detailed information about mutual funds, including how they are structured, their risks, and factors that influence investment decisions. The platform should help users understand and choose the right mutual funds for their needs.

- Admin: Oversee platform management, user activities, and content updates.
- Investor: Explore mutual funds, compare options, and manage investments.
- Financial Advisor: Provide advice, create educational content, and assist users in selecting the right mutual funds.
- Data Analyst: Analyze investment trends, update fund performance data, and generate reports.

FSAD-PS07: Election monitoring system to inspire upcoming voters

Develop a system to monitor elections and ensure they are fair and transparent. The app should help prevent fraud, track election processes, and encourage civic engagement among new voters by providing clear and reliable information.

- Admin: Manage the system, monitor election data, and ensure platform security.
- Citizen: Track election processes, report issues, and engage in civic discussions.
- Election Observer: Monitor election activities, report anomalies, and provide insights on fairness and transparency.
- Data Analyst: Analyze election data, generate reports, and provide real-time updates.

FSAD-PS08: Improve interaction between citizens and politicians

Create a web app that makes it easier for citizens to communicate with their elected representatives. The platform should allow users to report issues, provide feedback, and receive updates from politicians, improving transparency and responsiveness in governance.

- Admin: Oversee platform operations, manage user roles, and ensure data integrity.
- Citizen: Report issues, provide feedback, and receive updates from politicians.
- Politician: Respond to citizen concerns, post updates, and engage in discussions.
- Moderator: Monitor interactions, ensure respectful communication, and resolve conflicts.

FSAD-PS09: Reduce food wastage and improve food security

Build a platform to track and reduce food waste. The app should offer solutions to manage food resources more efficiently, help people understand the impact of food waste, and improve overall food security.

- Admin: Manage platform content, oversee user interactions, and ensure data accuracy.
- Food Donor: List surplus food, coordinate donations, and track impact.
- Recipient Organization: Request food donations, manage logistics, and distribute to those in need.
- Data Analyst: Track food waste trends, analyze data, and generate reports to improve efficiency.

FSAD-PS10: Develop a unique and effective learning management system (LMS)

Create a comprehensive LMS for managing online education. The app should handle user roles, course content creation, and publishing, making it easier for educators to deliver and manage online learning effectively.

- Admin: Manage platform settings, user roles, and course content.
- Instructor: Create and manage courses, grade assignments, and interact with students.
- Student: Enroll in courses, submit assignments, and track progress.
- Content Creator: Develop course materials, update content, and ensure educational quality.

FSAD-PS11: Support tourists with homestay ideas and nearby tourism places

Develop a platform that connects travellers with homestay options and provides information about nearby tourist attractions. The app should enhance the travel experience by offering personalized recommendations and local insights.

- Admin: Manage platform content, user interactions, and homestay listings.
- Homestay Host: List homestays, manage bookings, and interact with guests.
- Tourist: Search for homestays, book stays, and explore local attractions.
- Local Guide: Provide insights and recommendations on nearby tourism places.

FSAD-PS12: Promote handloom fashion products to global buyers

Develop a web application to display and sell handloom fashion products to buyers around the world. The platform should highlight the uniqueness of handloom items and help artisans reach a global audience.

- Admin: Oversee platform operations, manage user roles, and ensure content accuracy.
- Artisan: List handloom products, manage inventory, and interact with buyers.
- Buyer: Browse and purchase handloom items, track orders, and provide feedback.
- Marketing Specialist: Promote handloom products, manage campaigns, and engage with global audiences.

FSAD-PS13: Develop customizable ERP (Enterprise Resource Planning) software for educational institutions

Build an ERP system tailored for educational institutions, customizable to fit various needs such as student records, attendance, grading, and administrative tasks. The platform should help schools and colleges manage their operations more effectively, streamline processes, and improve overall institutional performance. It should include features for managing academic records, scheduling, and communication between students, teachers, and administrators.

- Admin: Configure ERP settings, manage user roles, and oversee system operations.
- Teacher: Manage student records, grade assignments, and schedule classes.
- Student: Access academic records, track attendance, and interact with teachers.
- Administrator: Oversee institutional operations, manage resources, and generate reports.

FSAD-PS14: Implement a placement interaction system to track placement records

Develop a system to manage and track student placements. The platform should allow companies to post job opportunities, students to apply for jobs, and track the status of their applications.

- Admin: Manage system settings, user roles, and placement data.
- Student: Explore job opportunities, apply for positions, and track application status.
- Employer: Post job listings, review applications, and interact with candidates.
- Placement Officer: Track placement records, generate reports, and facilitate employer-student interactions.

FSAD-PS15: Track and manage the loan issuance process

Design a web application to handle the loan issuance process, including tracking payments, calculating interest, and managing transaction records. The app should provide an effortless way to manage loans for both lenders and borrowers.

- Admin: Oversee platform operations, manage user accounts, and ensure data security.
- Lender: Create loan offers, track payments, and manage borrower interactions.
- Borrower: Apply for loans, track payment schedules, and manage loan details.
- Financial Analyst: Analyze loan data, assess risks, and generate financial reports.

FSAD-PS16: Develop an art gallery to display different artworks

Create a platform to display and manage various artworks in a virtual gallery. The app should provide information on the cultural history of the artworks and offer virtual tours of the gallery.

- Admin: Manage platform content, user roles, and gallery settings.
- Artist: Upload and manage artwork listings, interact with buyers, and track sales.
- Visitor: Browse and explore artworks, participate in virtual tours, and make purchases.
- Curator: Organize exhibitions, provide insights on artworks, and manage gallery content.

FSAD-PS17: Inspire society about farming and help farmers benefit from various sectors

Build a platform to raise awareness about the importance of farming and provide resources and support to farmers. The app should offer information and opportunities to enhance their livelihood and connect with different sectors.

- Admin: Manage platform content, oversee user interactions, and ensure data accuracy.
- Farmer: Access resources, connect with different sectors, and participate in farming initiatives.
- Agricultural Expert: Provide guidance, create educational content, and support farmers' needs.
- Public: Explore content, learn about farming, and engage in discussions.

FSAD-PS18: Enable users to find and hire the right professional for their needs

Design a web application that connects users with professionals for numerous services. The platform should include job search functionality, profiles for service providers, and a way for users to hire the right professional for their needs.

- Admin: Manage platform settings, user roles, and service listings.
- Professional: Create and manage profiles, list services, and interact with clients.
- User: Search for professionals, hire services, and provide feedback.
- Customer Support: Assist users with inquiries, resolve issues, and ensure a smooth experience.

FSAD-PS19: Promote awareness of the Indian Constitution

Create a platform to educate users about the Indian Constitution, including its framework, fundamental rights, and citizens' duties. The app should provide detailed information and interactive features to help users understand the Constitution better.

- Admin: Oversee platform content, manage user roles, and ensure the accuracy of information.
- Educator: Create educational content, conduct interactive sessions, and provide insights.

- Citizen: Explore content, participate in discussions, and engage with educational resources.
- Legal Expert: Offer legal insights, update constitutional content, and provide guidance.

FSAD-PS20: Create an online medical system for virtual consultations

Develop a web application that allows users to book virtual medical appointments, receive e-prescriptions, and access their medical records and lab reports. The app should facilitate remote healthcare services.

- Admin: Manage platform settings, oversee user accounts, and ensure data security.
- Doctor: Conduct virtual consultations, provide e-prescriptions, and manage patient records.
- Patient: Book appointments, access medical records, and receive virtual consultations.
- Pharmacist: Manage e-prescriptions, track orders, and provide medication information.

FSAD-PS21: Develop a smart city application to manage city details

Build a platform to manage and store essential details about a city, such as information on public services, infrastructure, and amenities. The app should help users access and navigate city-related information easily.

- Admin: Manage city information, update public services details, monitor infrastructure data.
- User: Access and search city details, report issues with public services, provide feedback on amenities.

FSAD-PS22: Add value to Indian middle-class residential properties

Design solutions and ideas to enhance the value of residential properties for the Indian middle class. The platform should provide recommendations and tools to make homes more attractive and valuable.

- Admin: Curate and update property improvement recommendations, manage property listings.
- User: View property enhancement ideas, submit property details for personalized recommendations.

FSAD-PS23: Design a solution for balancing diets and detecting nutrient deficits

Create a web application that helps analyze dietary habits and detect nutrient deficiencies, particularly in children and adolescents. The app should offer dietary recommendations and timely interventions.

- Admin: Manage nutritional data, update dietary recommendations, track user health data.
- User: Input dietary habits, receive personalized diet plans, monitor nutrient intake.

FSAD-PS24: Design a career guidance and counseling platform

Develop a web application that offers career advice and mentorship to students. The platform should provide resources on various career paths, connect students with career counsellors, and help them make informed career decisions based on their interests and skills.

- Admin: Manage career resources, connect students with counsellors, track user engagement.
- User: Access career advice, schedule counseling sessions, explore career paths.

FSAD-PS25: Create an online assignment submission and grading system

Build a web platform where students can submit their assignments electronically. Teachers should be able to review, grade, and provide feedback on these submissions. The system should streamline the grading process and make it easier for students to track their progress.

- Admin (Teacher): Upload assignments, grade submissions, provide feedback.
- User (Student): Submit assignments, view grades and feedback, track assignment deadlines.

FSAD-PS26: Develop a peer review and collaboration platform for students

Create a web application that allows students to work together on projects, review each other's work, and provide constructive feedback. The platform should support collaboration tools and facilitate peer evaluation to enhance learning and project outcomes.

- Admin (Teacher): Set up peer review assignments, monitor collaboration progress.
- User (Student): Review peers' work, provide feedback, collaborate on projects.

FSAD-PS27: Design a platform for organizing and managing student extracurricular activities

Develop a web application to help manage student involvement in extracurricular activities such as clubs, sports, and events. The platform should track participation, manage event registrations, and provide updates on upcoming activities.

- Admin: Manage extracurricular activity schedules, track student participation, update events.
- User (Student): Register for activities, track participation, receive event notifications.

FSAD-PS28: Create a web-based resource library for educational materials

Design a platform to organize and provide access to educational materials like textbooks, research papers, and study guides. The library should be searchable and accessible to students and educators for enhancing learning and research.

- Admin: Upload and organize educational resources, manage user access.
- User: Search and access educational materials, download resources, provide feedback on materials.

FSAD-PS29: Develop a student performance analytics and reporting system

Build a web application that analyzes student performance data to generate reports and insights. The system should help educators track academic progress, identify areas for improvement, and provide actionable recommendations to enhance student learning outcomes.

- Admin (Teacher): Input and analyze student performance data, generate reports.
- User (Student): View performance reports, track academic progress, identify areas for improvement.

FSAD-PS30: Create a web-based career assessment tool for students

Develop a platform that offers career assessments, personality tests, and skills evaluations. The tool should help students understand their strengths and preferences and provide recommendations for suitable career paths.

- Admin: Manage assessment tools, update test data, provide career recommendations.
- User (Student): Take career assessments, view results, explore career options.

FSAD-PS31: Develop an online platform for tracking and managing student scholarships and financial aid

Create a web application to help students find, apply for, and manage scholarships and financial aid. The platform should track application statuses, deadlines, and financial aid opportunities to support students in funding their education.

- Admin: Manage scholarship listings, track application statuses, update financial aid information.
- User (Student): Search for scholarships, apply for financial aid, track application progress.

FSAD-PS32: Create a web-based platform for academic conference management

Design a system to manage academic conferences, including handling paper submissions, peer reviews, scheduling sessions, and managing attendee registrations. The platform should streamline the conference management process and improve participant experience.

- Admin: Manage conference schedules, handle paper submissions, coordinate peer reviews.
- User (Participant): Submit papers, register for conferences, view conference schedules.

FSAD-PS33: Develop a student feedback and evaluation system

Create a web application to collect and analyze student feedback on courses, instructors, and institutional services. The system should provide insights and data to help improve the educational experience and address areas for improvement.

- Admin (Teacher/Institution): Create feedback forms, analyze feedback data, improve course content.
- User (Student): Provide feedback on courses and instructors, view aggregated feedback results.

FSAD-PS34: Design an online platform for professional skill certification tracking

Develop a web application to track and manage professional certifications. The platform should record certification details, track expiration dates, facilitate renewal processes, and store certificates for easy access and verification.

- Admin: Manage certification records, track expiration dates, facilitate renewals.
- User: Record certifications, monitor renewal deadlines, access certificates.

FSAD-PS35: Create a web-based platform for managing student group projects

Design a system to support group project management, including task assignments, progress tracking, and collaboration tools. The platform should help students coordinate their work and manage project milestones effectively.

- Admin (Teacher): Assign group projects, monitor progress, review final submissions.
- User (Student): Coordinate tasks, track project milestones, submit group work.

FSAD-PS36: Develop an online platform for student health and wellness resources

Create a web application providing access to health and wellness resources, such as mental health support, fitness programs, and nutrition advice. The platform should help students maintain their overall well-being and address health-related concerns.

- Admin: Manage health resources, update wellness programs, track usage metrics.
- User (Student): Access health resources, participate in wellness programs, seek support services.

FSAD-PS37: Design a platform for remote internship management and evaluation

Build a web application to manage and evaluate remote internships. The system should include features for task tracking, progress reports, and mentor feedback, facilitating the management of remote internship experiences.

- Admin (Employer): Post internship opportunities, track intern progress, provide evaluations.
- User (Student): Apply for internships, track tasks, receive feedback from mentors.

FSAD-PS38: Create a web-based platform for educational webinars and workshops

Develop a system to host and manage educational webinars and workshops. The platform should include registration features, live streaming capabilities, and post-event resources to support online learning events.

- Admin: Schedule webinars, manage registrations, upload post-event resources.
- User: Register for webinars, attend sessions, access recordings and materials.\

FSAD-PS39: Develop an online platform for tracking and managing student projects and portfolios

Create a web application where students can display their projects and portfolios. The platform should support project descriptions, media uploads, and progress tracking to help students present their work and achievements.

- Admin (Teacher/Institution): Manage portfolio submissions, review project progress, provide feedback.
- User (Student): Upload projects, update portfolios, track project milestones.

FSAD-PS40: Design a web-based platform for tracking and managing student learning outcomes

Develop a system to monitor and analyze student learning outcomes. The platform should track assessment data, academic progress, and performance metrics to evaluate educational effectiveness and support student achievement.

- Admin (Teacher): Track assessment data, analyze learning outcomes, generate reports.
- User (Student): View learning outcomes, monitor progress, identify areas for improvement.

FSAD-PS41: Create a platform for managing online workshops and training sessions

Design a web application to organize and conduct online workshops. The system should handle registration, scheduling, and interactive features to facilitate effective online training and skill development.

- Admin: Organize workshop schedules, manage registrations, upload training materials.

- User: Register for workshops, participate in sessions, access post-training resources

FSAD-PS42: Develop a web-based system for managing student work-study programs

Create a platform to manage work-study opportunities, including job postings, student applications, and work performance tracking. The app should help students find and manage work-study positions while supporting program administration.

- Admin: Post work-study opportunities, manage applications, track student work hours.
- User (Student): Apply for work-study positions, track work hours, receive feedback.

FSAD-PS43: Design a platform for virtual career fairs and networking events

Develop a web application to host virtual career fairs and networking events. The platform should feature company booths, resume submissions, and live chat capabilities to facilitate networking and job opportunities.

- Admin: Organize career fair schedules, manage company booths, handle registrations.
- User (Student/Job Seeker): Register for fairs, visit company booths, submit resumes.

FSAD-PS44: Create an online course management system for educators

Design a web application for educators to create, manage, and deliver online courses. The system should support course content management, assignment submissions, and student assessments to enhance the online teaching experience.

- Admin (Educator): Create courses, manage content, track student progress.
- User (Student): Enroll in courses, access course materials, submit assignments.

FSAD-PS45: Develop a web-based platform for managing student extracurricular achievements

Create a system to track and manage student achievements in extracurricular activities. The platform should record awards, recognitions, and participation to display students' accomplishments beyond academics.

- Admin: Record extracurricular achievements, update participation data, provide reports.
- User (Student): View and track extracurricular achievements, showcase participation.

FSAD-PS46: Design a platform for online mentorship and coaching programs

Develop a web application to facilitate online mentorship and coaching. The platform should include features for mentor matching, session scheduling, and progress tracking to support personal and professional development.

- Admin: Match mentors with mentees, manage mentorship sessions, track progress.
- User (Mentee): Connect with mentors, schedule sessions, track development.

FSAD-PS47: Create a web-based platform for academic research collaboration

Design a system to support collaboration among academic researchers. The platform should offer tools for project management, document sharing, and communication to enhance research efforts and partnerships.

- Admin: Manage research projects, facilitate document sharing, coordinate communication.
- User (Researcher): Collaborate on projects, share research materials, track project milestones.

FSAD-PS48: Develop an online platform for student course selection and scheduling

Create a web application that allows students to select courses and build their schedules. The system should manage course registrations, schedule conflicts, and provide an overview of available classes.

- Admin: Manage course listings, handle registration, resolve scheduling conflicts.
- User (Student): Select courses, build schedules, manage registrations.

FSAD-PS49: Develop a mental health support platform for students

Create a web application that provides mental health resources, counseling services, and support groups for students. The platform should include features like virtual therapy sessions, self-help resources, and forums for peer support to promote mental well-being.

- Admin: Provide mental health resources, update support services, manage counseling sessions.
- User (Student): Access mental health resources, schedule therapy sessions, participate in support groups.

FSAD-PS50: Design an online platform for sustainable living education

Develop a web application that educates students about sustainable living practices. The platform should offer interactive lessons, project ideas, and resources on topics like renewable energy, waste reduction, and eco-friendly lifestyle choices to encourage environmentally responsible behavior.

- Admin: Manage educational content, update sustainability resources, track user engagement.
- User: Access lessons on sustainable living, participate in projects, track progress towards eco-friendly goals.
